**Grey House Publishing announces the Fourth Edition of
*The Comparative Guide to American Hospitals***

This is the fourth edition of *The Comparative Guide to American Hospitals*. It reports on how 4,834 hospitals (141 more than last edition) in America measure up when caring for patients with a number of specific conditions. Each hospital in this edition is rated on 67 recognized quality measures (18 more than last edition) and is compared to both state and national averages.

In *The Comparative Guide to American Hospitals*, the data is organized, sorted and ranked by our editors. It is this organization and ranking that makes this title a unique and valuable tool to the health care consumer.

Data is presented in such a way as to inform and educate the user, who can then put the facts into a meaningful context as hospitals are evaluated state by state. Due to the increased data, and the regional use of such data, this edition is again comprised of four regional volumes—Eastern, Southern, Central and Western.

In addition to comprehensive hospital rankings and profiles for all states in the region, each volume includes four Appendices with additional information. This critical contact data includes fax numbers, web sites, email addresses, and number of beds plus 24,458 key contact names—783 more names than last edition. In addition, each state chapter includes State Hospital Rankings.

The Comparative Guide to American Hospitals also comes with one year free online access. With a subscription to the online database, users can access this wealth of information in just minutes. With the keyword search, quick search and expert search online, users can quickly and easily find the information they're looking for. Plus, subscribers can do quick or in-depth searches, save their searches, save search results, sort search results, view company profiles, download contact sheets, click through to email and web hotlinks, and so much more.

This completely revised fourth edition of *The Comparative Guide to American Hospitals* is a valuable guide for the entire medical community, with more hospitals, more criteria measures and more key executives than the last edition. It offers an indispensable snapshot of how hospitals measure up, not only to established “best practices,” but also to each other.
