**Grey House Publishing announces the 2007 Edition of  
*The Grey House Safety & Security Directory***

Grey House Publishing announces the publication of the 2007 Edition of *The Grey House Safety & Security Directory*.

This directory supplies all types of safety professionals, including engineers, construction site and plant managers, with safety and security information necessary for maintaining OSHA compliance. As the premier source in the industry, *The Grey House Safety & Security Directory* is complete with all the important safety regulations and training materials, as well as products and services.

This new 2007 edition is greatly expanded from the previous edition, containing updated OSHA regulations, more training articles, additional self-inspection checklists, larger buyers' guides, and more company profiles. Our editorial department has logged in hundreds of hours of work to ensure that this edition will continue the publication's legacy as a standard industry reference source.

*The Grey House Safety & Security Directory* is divided into sixteen main chapters, reflecting OSHA regulations and covering topics such as Consulting, Insurance & Loss Control, Employee Health Maintenance & Ergonomics, Fire & Rescue, Hazardous Materials Handling, Noise & Vibration, Protective Equipment & Apparel, and much more. Each chapter begins with the appropriate OSHA regulations and OSHA-produced guidelines and advice, such as "How to Comply with OSHA's Records, Reports and Notices." Following the regulations is a section containing Training Articles. We've expanded our selection of Training Articles by reprinting popular articles from previous editions as well as by including several new articles written especially for this 2007 edition. The 70 articles included in this edition are written by industry experts and address important safety issues, such as: "Safety Training for People with Disabilities," "Sensor Selection for Hand-Held Portable Gas Detectors," "MSDS: A Roadmap for Safe Storage and Handling of Hazardous Materials," "Emergency Management: Can Your Company Survive Without It?" and much more.

—continued—

Grey House Publishing announces the 2007 Edition of *The Grey House Safety & Security Directory*

The third component of most chapters is a section of Self-Inspection Checklists. We understand that these checklists are very helpful for workers within the safety and security industry, so we've increased the number included in this edition to 32. Checklists cover topics like "Machine Guard Safety Interlock Switches," "Warning & Signaling Devices for Plant and Roadway Work Areas," "Supermarket Safety," "Cadmium Exposure," and are, like the Training Articles, written by industry experts.

The final section of each chapter contains Buyers' Guides for products specified in the OSHA regulations. The 79 Buyers' Guides in this edition have been expanded to include hundreds more companies than were listed in previous editions. Buyers' Guides are organized by sections and divided into subsections for specific kinds of products. For example, the listings for Particulate Mass Monitors are located in the Buyers Guide for Exterior Air Monitoring & Analysis, and are divided into a section for Beta Attenuation Particulate Mass Monitors and Photometer Particulate Mass Monitors. This clear organization makes it easy for the user to differentiate between products.

Following the sixteen main sections are several additional components: Company Profiles, Industry Resources, Glossary, Product Index and Advertiser Index. The Company Profiles section contains listings for 500 major players in the safety and security industry. Listings include basic contact information as well as a brief description of the company's products and activities. Each profile is also accompanied by a list of the Buyers' Guides in which the manufacturers products appear. The Industry Resources section features resources ranging from Professional Associations to Newsletters, Magazines & Journals, Trade Shows, Directories & Databases, and more. The Glossary contains definitions for more than 500 commonly-used industry terms, and the Product Index is an alphabetical list of the products featured in the Buyers' Guides, making it easy for the user to locate the exact product needed without searching through each Buyers' Guide.

Designed for the busy safety and security professional, *The Grey House Safety & Security Directory* is a comprehensive reference that provides training and management support as well as in-depth information on important OSHA regulations and valuable product listings and manufacturer information. Whether the user is a plant manager, shift supervisor, training coordinator, safety compliance officer, human resources professional, loss prevention and control expert, insurance adjuster or safety consultant, this new and improved 2007 *Safety & Security Directory* will be an indispensable desktop reference book.
