Social statistics for a diverse society / Chava Frankfort-Nachmias, University of Wisconsin-Milwaukee, Anna Leon-Guerrero, Pacific Lutheran University, Georgiann Davis, University of New Mexico.. Tenth edition. Thousand Oaks, California: SAGE, 2401 pages cm Includes bibliographical references and index. "You may be reading this introduction on your first day of class. We know you have some questions and concerns about what your course will be like. Math, formulas, and calculations? Yes, those will be part of your learning experience. But there is more. Throughout our text, we highlight the relevance of statistics in our daily and professional lives. Data are used to predict public opinion, consumer spending, and even a presidential election. How Americans feel about a variety of political and social topics—race relations, gun control, immigration, the economy, health care reform, or terrorism—are measured by surveys and polls and reported daily by the news media. Your recent Amazon purchase didn't go unnoticed. The study of consumer trends, specifically focusing on young adults, helps determine commercial programming, product advertising and placement, and, ultimately, consumer spending. And as we prepare this text, the world struggles to comprehend political divides, climate change, m [HA29.N25 2025] 23/eng/20231115 2023-051359 ISBN 1-0719-1047-7 price unreported

Spatial statistics for data science: theory and practice with R / Paula Moraga. First edition. Boca Raton, FL: CRC Press, 2401 pages cm. (Chapman & Hall/CRC data science series) Includes bibliographical references and index. "Spatial data is crucial to improve decision-making in a wide range of fields including environment, health, ecology, urban planning, economy, and society. *Spatial Statistics for Data Science: Theory and Practice with R* describes statistical methods, modeling approaches, and visualization techniques to analyze spatial data using R. The book provides a comprehensive overview of the varying types of spatial data, and detailed explanations of the theoretical concepts of spatial statistics, alongside fully reproducible examples which demonstrate how to simulate, describe, and analyze spatial data in various applications. Combining theory and practice, the book includes real-world data science examples such as disease risk mapping, air pollution prediction, species distribution modeling, crime mapping, and real state analyses. The book utilizes publicly available data and offers clear explanations of the R code for importing, manipulating, analyzing,

and visualizing data, as well as the int [QA278.2.M684 2024] 23/eng/20231023 2023-035998 ISBN 1-032-64148-7 price unreported

What do we know about the kraken? / by Ben Hubbard; illustrated by Robert Squier. New York: Penguin Workshop, 2401 pages cm (What do we know about?) Contents: What do we know about the kraken? — The ancient kraken — Scandinavian sightings — The disgrace of de Montfort — Serpents and scientific discovery — Whats in a giant squid? — Giant and colossal — The popular kraken — Timelines. Includes bibliographical references. "Sea monsters have a long history in lore and literature. Homer first wrote of them in 700 BCE. What Do We Know About the Kraken? lets curious young readers explore what we actually know about this mysterious sea monsters long history. Dive into the facts behind this massive squid-like creature that was first described using the word "Kraken" in the beginning of the eighteenth century. For centuries, sailors have feared the Kraken, which they believe lurks in the ocean, waiting to pull ships beneath the surface with its powerful tentacles. Several famous writers such as Alfred, Lord Tennyson and Jules Verne have described monsters inspired by the Kraken. In this book, readers will also learn about the real creature that might have inspired the Kraken — the giant squid" — [QL89.2.K73H83 2024] 23 2023-037288 ISBN 0-593-65846-9 lib. bdg. 15.99 ISBN 0-593-65845-0 Digest Paperback 6.99

Read write own: building the next era of the Internet / Chris Dixon. First edition. New York: Random House, 2401 pages cm Includes bibliographical references and index. "The Internet of today is a far cry from its early promise of a decentralized, democratic network of creativity and innovation. In the past decade, the Internet has fallen under the control of a tiny group of massive companies like Apple, Google, and Facebook. In *Read Write Own*, tech visionary Chris Dixon argues that the dream of an open network for fostering creativity and entrepreneurship doesn't have to die, and that in fact it can, and must, be saved with blockchain networks, which he vitally separates from the currency-based speculation that it is unfortunately lumped together with - a distinction he calls "The Computer vs The Casino". With lucid and compelling prose - and drawing from his first-hand observations, mental models, and experiences over a 25-year career in the Internet industry - Dixon shows how the Internet has undergone three distinct eras, bringing us to the critical moment we're in today. The first act was the "read era," lasting from 1990 to 2005, in which early In [HD9696.8.A2D59 2024] 23 2023-041266 ISBN 0-593-73138-7 31.00

"With the proliferation of information, big data management and analysis have become an indispensable part of any system to handle such amounts of data. The amount of data generated by the multitude of interconnected devices increases exponentially, making the storage and processing of these data a real challenge. Big data management and analytics have gained momentum in almost every industry, ranging from finance or healthcare. Big data can reveal key insights if handled and analyzed properly; it has great application potential to improve the working of any industry. This book covers the spectrum aspects of big data; from the preliminary level to specific case studies. It will help readers gain knowledge of the big data landscape. Highlights of the topics covered include description of the Big Data ecosystem; real-world instances of big data issues; how the Vs of Big Data (volume, velocity, variety, veracity, valence, and value) affect data collection, monitoring, storage, analysis, a [QA76.9.B45G86 2024] 23/eng/20230601 2023-017153 ISBN 981-12-57111-6 price unreported

Includes bibliographical references and index. "Museums, Children and Social Action examines the role that museums play in reaching, teaching and inspiring children as global citizens of the world and, looking to the future, argues that the sustainability of museums will come from strengthening relationships with young visitors. Presenting a diverse range of programs, exhibitions, and outreach from museums across five continents, Shaffer highlights how museums are already serving children and making a difference to their lives. Arguing that museums have a unique responsibility to connect this audience with relevant social issues and challenges, such as social injustice, racism, climate change and poverty, Shaffer simultaneously acknowledges that a large number of children are still on the margins of the institution and its mission. Recognizing the ways in which museums are currently serving children, the book also considers what museums could and should be doing as they plan for the future, raising critical questions about core val [AM7.S434 2024] 23 2023-052381 ISBN 1-032-12059-2 170.00 ISBN 1-032-12058-4 pap. 48.95

Including contributions from authors working in the disciplines of architecture, psychology, museum studies, history and the visual arts, this volume addresses an interdisciplinary audience. The analysis of a wealth of examples shows how the voices of architects, curators and exhibition designers enter into dialogue and invite visitors to make their own connections between physical, cognitive and affective space. Considering how the layout of museums facilitates movement and orientation so that visitors may devote their attention to displays, the book questions what kinds of visual attention characterizes museum experiences and how the design of museum space can support them. This book is an expansive history of community weekly newspapers in the United States during the twentieth century. It explores such topics as ownership, business practices, employees and hiring practices, educating college students to work for weeklies, community involvement, government propaganda campaigns in small-town weeklies, syndication services, community leadership, advertising and other revenue sources, and competition for audiences with the development of radio and television. Weeklies told the story of average American daily lives more thoroughly and in a more personal manner than the big-city dailies. In essence, the weekly publisher-editor served as author of his communitys life story. "The ultrawealthy largely own and guide the newspaper system in the United States. Through entities like hedge funds and private equity firms, this investor class continues to dismantle the one institution meant to give voice to average citizens in a democracy. Margot Susca reveals the little-known history of how private investment took over the newspaper industry. Drawing on a political economy of media, Suscas analysis uses in-depth

interviews and documentary evidence to examine issues surrounding ownership and power. Susca also traces the scorched-earth policies of layoffs, debt, cash-outs, and wholesale newspaper closings left behind by private investors and the effects of the devastation on the future of news and information. Throughout, Susca reveals an industry rocked less by external forces like lost ad revenue and more by ownership and management obsessed with profit and beholden to private fund interests that feel no responsibility toward journalism or the public it is meant [PN4867.2.S87

Includes bibliographical references and index. "In this new book, Florian Klinger gives readers a basic action-theoretical account of the aesthetic. While normal action fulfills a determinate concept, Klinger argues, aesthetic action performs an indeterminacy by suspending the actions conceptual resolution. Taking as examples work by Tino Sehgal, Kara Walker, Mazen Kerbaj, Marina Abramovic, Cy Twombly, and Franz Kafka, the book examines indeterminacy in such instances as a walk that is at once leisurely and purposeful, a sound piece that is at once joyous and mournful and mechanical, or, a sculpture that at once draws one in and shuts one out. Because it has irresolution as its point, aesthetic action presents itself as an unsettling of ourselves, our ways, our very sense of who we are. As performers of such action, we don't recognize one another as bearers of a shared human form as we normally would, but find ourselves tasked anew with figuring out what sharing a form would mean. "The decades following the civil rights and decolonization movements of the sixties and seventies - termed the post-soul era - created new ways to understand the aesthetics of global racial representation. Daphne Lamothe shows that beginning around 1980 and continuing to the present day, Black literature, art, and music resisted the pull of singular and universal notions of racial identity. Developing the idea of Black aesthetic time - a multipronged theoretical concept that analyzes the ways race and time collide in the process of cultural production - she assesses Black fiction, poetry, and visual and musical texts by Paule Marshall, Zadie Smith, Tracy K. Smith, Dionne Brand, Toyin Ojih Odutola, and Stromae, among others. The end of epistemology as we know it / Brian Talbot. New York, NY: Oxford University Press, 2401 volumes cm Contents: The importance of epistemic norms demands an explanation — Consequentialist vindication — Responding to some fundamental objections — Respect-based vindication — Epistemic norms and action — Social vindication — Tying up loose ends — Speculation about replacement epistemic norms. Includes bibliographical references and index. "The epistemic norms should matter. The ones philosophers typically focus on do not matter enough. So we should replace them. While the replacement norms will agree to some significant extent with more standard epistemic norms, they will vary quite significantly as well. They will permit us to form some seemingly bad beliefs - beliefs that violate all standard norms by going against our evidence, being incoherent, or even being clearly false - in order to improve other beliefs. In fact, they will sometimes allow our beliefs to be bad for no reason whatsoever. That paragraph summarizes the project of this book. What does it mean? First, what are epistemic norms? Answering this is complicated by the fact that there is no uncontroversial characterization of the epistemic and by my goal to engage with a wide variety of views. For that reason, I sketch the extension of what I am talking about rather than try to give a definition that all epistemic norms fit. This is only a sketch; anything [BD161.A48 2024] 23 2023-033740 ISBN 0-19-774363-3 90.00

Discussion with the Department of Philosophy; Discussion with the Department of History; Discussion with the Department of French. Includes bibliographical references and index. "On May 27, 1978, Michel Foucault gave a lecture to the French Society of Philosophy where he redefines his entire philosophical project in light of Immanuel Kants 1784 text, "What Is Enlightenment?" Foucault strikingly characterizes critique as the political and moral attitude consisting in the "art of not being governed in this particular way," one that performs the function of destabilizing power relations and creating the space for a new formation of the self within the "politics of truth." This volume presents the first critical edition of this crucial lecture alongside a previously unpublished lecture about the culture of the self and three public debates with Foucault at the University of California, Berkeley in April 1983. There, for the first time, Foucault establishes a direct connection between his reflections on Enlightenment and his analyses of Greco-Roman antiquity. However, far from suggesting a return to the ancient culture of the self, Foucault invites his audience to

Includes bibliographical references and index. "This book explores both scientific and humanistic theoretical traditions in anthropology through the lens of ontology. The first part of the book examines different methods for generating valid anthropological knowledge, and proposes a shift in current consensus. Drawing on western scholars of antiquity and the medieval period and moving away from twentieth century theorists, it argues that we must first make ontological assumptions about the kinds of things that can exist (or not) before we can then develop epistemologies that study those kinds of things. The book goes on to apply the ontology-first theory to a set of case studies in modern day conspiracy theories, misinformation, and magical thinking. It asserts that we need to move away from unneeded metaphysical assumptions of conspiracy theories being misinformation, and argues that reconstructing particular historical events can be a fruitful zone for application of quantitative methods to humanistic questions. BEHAVIOR analysis: 150.19'43
 translational perspectives and clinical practice / edited by Henry S. Roane, Andrew R. Craig, Valdeep Saini, Joel E. Ringdahl. New York, NY: The Guilford Press, 2401 pages cm Includes bibliographical references and index. "Throughout this text, many of the research paradigms and methodologies across experimental analysis of behavior (EAB) and applied behavior analysis (ABA) are presented within the "bench-to-bedside" approach of translational research described by the National Institutes of Health. The first few chapters of the text introduce underlying core tenets of behaviorism as well as core characteristics and methods that define the field of behavior analysis. The next several chapters of the book introduce the reader to some of the foundational principles of behavior analysis, with coverage from both the EAB and ABA perspectives. The final chapters of the book cover topics for which there has been ample basic, applied, and translational research conducted. The text concludes with a chapter on ethics, which includes content related to ethical issues in research, ethical issues in clinical practice, and the ethical use of nonhuman animals and special populations in research" — [BF199.B34 2024] 23/eng/20230928 2023-021509 ISBN 1-4625-5349-4 113.00

Love stories for the nonhuman — "Becoming-animal": evolving love in animal sex experiments — Eco/ontologies: love, sex reform, and environmental sciences — Planetary intimacies: physics, occultism, and nonhumans in love — Reinventing Love as technologies of sex and marital intimacies — Romancing evolutionary biology: darwinism in the metropolis — Conclusion. Genealogies of love: darwinian romances in reproductive sciences. Includes bibliographical references and index. "The Politics of Love explores the entanglement of emotions, social movements, and science in reconfiguring human and nonhuman relations. As Darwins evolutionary theory informed the development of sexual science and the sex reform movement between the 1890s and the 1920s, sex reformers emerged as a group of diverse and culturally influential professionals-doctors, psychologists, artists, political activists, novelists, and academics-who shared a profound commitment to changing the world by changing the practice of sex. Sex reformers reinvented love as a scientific practice of sex that brought humans and nonhumans into the fold of early-twentieth-century racial, gender, and sexual politics. Carla Christina Hustak illuminates how sex reformers insistence that love can shift human and nonhuman relations is more than just a historical narrative-it is a moment in time interconnected with urgent contemporary concerns over the global implications of our emotional relationships to other humans [BF575.L8H694 2024] 23/eng/20230928 2023-028625 ISBN 0-520-39521-2 85.00 ISBN 0-520-39522-0 pap. 29.95

Heres How to Cope: transitions give us an oppo "Work is stressful: We race to meet deadlines. We extend ourselves to return favors for colleagues. We set ambitious goals for ourselves and our teams. We measure ourselves against metrics, our competitors, and sometimes, our colleagues. Some of us even go beyond tangible metrics to internalize stress and fear of missing the mark-ruminating over presentations that didnt go according to plan, imagining worst-case scenarios, or standing frozen, paralyzed by perfectionism. In fact, anxiety is the most prevalent mental disorder worldwide, existing at different levels and in different ways, depending on your genes, chemistry, background, environment, social network, and so on. But hypervigilance, worry, and catastrophizing dont have to hold you back at work. When channeled thoughtfully, anxiety can motivate us to be more resourceful, productive, and creative. It can break down barriers and create new bonds with our colleagues. Monks in the late Roman Empire beat us to it. Concentration was their job, which made them more aware of how hard it was to master. John Cassian was a monk who lived in the Roman Empire in the fourth and early fifth centuries, the very early days of monasticism. He was born in the Levant and joined his first monastery there, then spent over twenty years in Egypt, interviewing and learning from ascetic hermits. Eventually, he moved to Marseilles to start his own monastery. He found that the monks in Gaul were hungry for stories of what hed learned in Egypt, and in the 420s, wrote a massive record of his most memorable conversations with the Egyptian ascetics called the Collationes (or Conferences), in which one of the cen [BR65.C32E5 2024] 23 2023-010545 ISBN 0-691-20808-5 17.95
