

average, more than 10 times as often as it does today; this flooding can be intensified by local factors. “Major” (often destructive) flooding is expected to occur 5 times as often in 2050 (0.2 events/year) as it does today (0.04 events/year).⁷³ This is especially troubling for people with disabilities living in these areas, and especially those with mobility disabilities who do not have the funds to raise the elevation of their home to mitigate the risk of flood or those who are trapped in their home during a flood event with no option to evacuate.

U.S. Territories

In September 2017 Hurricane Maria made landfall in Puerto Rico and decimated its infrastructure. In Maria’s aftermath, some 3.4 million American citizens found themselves in a humanitarian crisis, facing destroyed infrastructure; power

outages lasting for over six months; shortages of water, food, and fuel; and an uncertain future.⁷⁴ In January 2020, Puerto Rico suffered a 6.4 magnitude earthquake and continuing aftershocks in the southwestern part of the island that destroyed homes and businesses, further weakening an already dire economy and creating significant impact to the health and well-being of the residents of Puerto Rico. In March 2020, Puerto Rico, along with the rest of the world, was hit with the COVID-19 pandemic, which strained health and medical systems. The government took early precautions by shuttering all businesses, except for essential services. These restrictions, though necessary, saddled the island with further economic burdens, leaving thousands unemployed, resulting in increased poverty rates and further widening the gap to accessible services for people with

Recommendations

- Congress should pass legislation such as the REAADl in Disasters Act to address gaps in meeting civil rights obligations to people with disabilities impacted by disasters. The bill would establish a research center to be defined in legislation, to conduct research to determine recommended practices for including people with disabilities and older adults in planning during and following disasters; Establish a “projects of national significance” program to increase the involvement of people with disabilities and older adults in the planning and response to disasters and identify strategies for reducing deaths, injuries, and losses to those groups as a result of disasters; Establish a National Commission on Disability Rights and Disasters that will provide recommendations on how to ensure effective emergency preparedness, disaster response, recovery, and community resilience efforts for people with disabilities and older adults; Establish Training and Technical Assistance Disability and Disaster Centers that provide comprehensive training, technical assistance, development of funding sources, and support to state, tribal, and local disaster relief; public health entities; social service agencies; and stakeholder groups.
- Congress should appropriate funds to FEMA for the express purpose to advise SLTTs EMAs and state health departments to conduct reviews and update emergency management plans and guidance to prepare for an increase of people with disabilities. The plans should be data-driven, inclusive, and compliant with disability laws to ensure equal access including effective communication, evacuations, and shelters that provide accommodations and modifications to ensure the safety of people with disabilities.
- HHS Office of Civil Rights (OCR) should develop additional guidance for healthcare providers to actively prepare and plan for an increase of people with disabilities requiring healthcare services during disasters.
- HHS and the National Advisory Council on Innovation & Entrepreneurship (NACIE) should launch a multiagency national emergency management strategy to help states plan for an increase in the number of people with disabilities to mitigate risks during disasters.
- Federal and SLTT EMAs and state health departments should request congressional funding to surge medical resources (equipment and supplies) for disasters.
- HHS should provide guidance to SLTTs on standardized disability categories and levels to inform emergency management planning. The methodology should be used at all levels of government to ensure complete and consistent data collection.

Citation: Paul, S., Rogers, S., Bach, S., & Houtenville, A. (2023). Annual Disability Statistics Compendium: 2023 (Table 1.3). Durham, NH: University of New Hampshire, Institute on Disability. Note: Authors' calculations using the U.S. Census Bureau American Community Survey, Public Use Microdata Sample, 2021, which is subject to sampling variation. [1] The U.S. Census uses a series of six questions to identify persons with vision, hearing, cognitive, ambulatory, self-care, and independent living disabilities. The cognitive, ambulatory, and self-care related questions are not asked of individuals less than five years old and the independent living related question is not asked of individuals less than 15 years old. See glossary for more information.
