

Section I: Contents

This section contains Weiss Investment Ratings, key rating factors, and summary financial data for over 2,200 Exchange-Traded funds. Funds are listed in alphabetical order.

Left Pages

Fund Name

Describes the fund's assets, regions of investments and investment strategies. Many funds have similar names, so you want to make sure the fund you look up is really the one you are interested in evaluating.

MARKET

Ticker Symbol

An arrangement of characters (usually letters) representing a particular security listed on an exchange or otherwise traded publicly. When a company issues securities to the public marketplace, it selects an available ticker symbol for its securities which investors use to place trade orders. Every listed security has a unique ticker symbol, facilitating the vast array of trade orders that flow through the financial markets every day.

Traded On (Exchange)

The stock exchange on which the fund is listed. The core function of a stock exchange is to ensure fair and orderly trading, as well as efficient dissemination of price information. Exchanges such as: NYSE (New York Stock Exchange), AMEX (American Stock Exchange), NNM (NASDAQ National Market), and NASQ (NASDAQ Small Cap) give companies, governments and other groups a platform to sell securities to the investing public. NASDAQ is abbreviated as NAS.

RATINGS

Overall Rating

The Weiss rating measured on a scale from A to E based on each fund's risk and performance. See the preceding section, "What Our Ratings Mean," for an explanation of each letter grade rating.

Reward Rating

This is based on the total return over a period of up to five years, including net asset value and price growth. The total return figure is stated net of the expenses and fees charged by the fund. Based on proprietary modeling the individual components of the risk and reward ratings are calculated and weighted and the final rating is generated.

Risk Rating

This includes the risk ratings of component stocks where applicable and also includes the financial stability of the fund, turnover where applicable, together with the level of volatility as measured by the fund's daily returns over a period of up to five years. Funds with greater stability are considered less risky and receive a higher risk rating. Funds with greater volatility are considered riskier, and will receive a lower risk rating. In addition to considering the fund's volatility, the risk rating also considers an assessment of the valuation and quality of a fund's holdings.

Recent Upgrade/Downgrade

An "Up" or "Down" indicates that the Weiss Exchange-Traded Fund rating has changed since the publication of the last print edition. If a fund has had a rating change since December 31, 2020, the change is identified with an "Up" or "Down."

PRICE

Price

The price at which the fund is traded on a regular trading day. Prices in this guide are listed as of March 31, 2021.

52-Week High

The highest price that a fund has achieved during the previous 52 weeks.

52-Week Low

The lowest price that a fund has achieved during the previous 52 weeks.

Open to New Investors

Indicates whether the fund accepts investments from those who are not existing investors. A "Y" in this column identifies that the fund accepts new investors. No data in this column indicates that the fund is closed to new investors. The fund may be closed to new investors because the fund's asset base is getting too large to effectively execute its investing style. Although, the fund may be closed, in most cases, existing investors are able to add to their holdings.

CATEGORY & OBJECTIVE

Category

Identifies funds according to their actual investment styles as measured by their portfolio holdings. This categorization allows investors to spread their money around in a mix of funds with a variety of risk and return characteristics.

Prospectus Objective

Gives a general idea of a fund's overall investment approach and goals.

Right Pages

RETURNS & PERFORMANCE

3-Month Total Return

The rate of return on an investment over three months that includes interest, capital gains, dividends and distributions realized.

6-Month Total Return

The rate of return on an investment over six months that includes interest, capital gains, dividends and distributions realized.

1-Year Total Return

The rate of return on an investment over one year that includes interest, capital gains, dividends and distributions realized.

3-Year Total Return

The rate of return on an investment over three years that includes interest, capital gains, dividends and distributions realized.

5-Year Total Return

The rate of return on an investment over five years that includes interest, capital gains, dividends and distributions realized.

Dividend Yield (TTM)

Trailing twelve months dividends paid out relative to the share price. Expressed as a percentage and measures how much cash flow an investor is getting for each invested dollar. **Trailing Twelve Months (TTM)** is a representation of a fund's financial performance over the most recent 12 months. TTM uses the latest available financial data from a company's interim, quarterly or annual reports.

Expense Ratio

A measure of what it costs an investment company to operate an exchange-traded fund. An expense ratio is determined through an annual calculation, where a fund's operating expenses are divided by the average dollar value of its assets under management. Operating expenses may include money spent on administration and management of the fund, advertising, etc. An expense ratio of 1 percent per annum means that each year 1 percent of the fund's total assets will be used to cover expenses.

3-Year Standard Deviation

A statistical measurement of dispersion about an average, which depicts how widely the returns varied over the past three years. Investors use the standard deviation of historical performance to try to predict the range of returns that are most likely for a given fund. When a fund has a high standard deviation, the predicted range of performance is wide, implying greater volatility. Standard deviation is most appropriate for measuring risk if it is for a fund that is an investor's only holding. The figure cannot be combined for more than one fund because the standard deviation for a portfolio of multiple funds is a function of not only the individual standard deviations, but also of the degree of correlation among the funds' returns. If a fund's returns follow a normal distribution, then approximately 68 percent of the time they will fall within one standard deviation of the mean return for the fund, and 95 percent of the time within two standard deviations.

Effective Duration

Effective duration for all long fixed income positions in a portfolio. This value gives a better estimation of how the price of bonds with embedded options, which are common in many exchange-traded funds, will change as a result of changes in interest rates. Effective duration takes into account expected mortgage prepayment or the likelihood that embedded options will be exercised if a fund holds futures, other derivative securities, or other funds as assets, the aggregate effective duration should include the weighted impact of those exposures.

ASSETS

NAV (Net Asset Value)

A fund's price per share. The value is calculated by dividing the total value of all the securities in the portfolio, less any liabilities, by the number of fund shares outstanding.

Total Assets (MIL)

The total of all assets listed on the institution's balance sheet. This figure primarily consists of loans, investments, and fixed assets. Total Assets are displayed in millions.

ASSET ALLOCATION & TURNOVER**Asset Allocation**

Indicates the percentage of assets in each category. Used as an investment strategy that attempts to balance risk versus reward by adjusting the percentage of each asset in an investment portfolio according to the investor's risk tolerance, goals and investment time frame. Allocation percentages may not add up to 100%. Negative values reflect short positions.

%Cash

The percentage of the fund's assets invested in short-term obligations, usually less than 90 days, that provide a return in the form of interest payments. This type of investment generally offers a low return compared to other investments but has a low risk level.

%Stocks

The percentage of the fund's assets invested in stock.

%Bonds

The percentage of the fund's assets invested in bonds. A bond is an unsecured debt security issued by companies, municipalities, states and sovereign governments to raise funds. When a company issues a bond it borrows money from the bondholder to boost the business, in exchange the bondholder receives the principal amount back plus the interest on the determined maturity date.

%Other

The percentage of the fund's assets invested in other financial instruments.

Turnover Ratio

The percentage of an exchange-traded fund or other investment vehicle's holdings that have been replaced with other holdings in a given year. Generally, low turnover ratio is favorable, because high turnover equates to higher brokerage transaction fees, which reduce fund returns.

VALUATION

Premium/Discount 1-Year Average

The annual average premium or discount of the market price to the NAV (Net Asset Value), expressed as a percentage of the NAV. This value provides a year-by-year picture a fund's trading status. A negative number indicates that, on average, the fund's shares sold at a discount to NAV, and a positive number indicates the shares sold at a premium. If the number shown is -10.00, for example, the shares sold at an average 10% discount to NAV during the listed time-period.

Inception Date

The date on which the fund began its operations. The commencement date indicates when a fund began investing in the market. Many investors prefer funds with longer operating histories. Funds with longer histories have longer track records and can thereby provide investors with a more long-standing picture of their performance.
