

Introduction

Welcome to the 5th edition of *Profiles of Wisconsin* from Grey House Publishing. The state profile series—now 15 books strong—was developed in 2006, derived from the award-winning 4-volume *Profiles of America*, which compiles data on more than 43,000 places in the United States.

This new edition of *Profiles of Wisconsin* includes all the valuable, in-depth and up-to-date information that these works are known for, but now, this rich content has been reorganized and rearranged, and is fully illustrated with images to support the text and statistics. It is easier to use and more accessible for a variety of users—from high school students to relocation professionals.

Starting with this edition, all the state profiles will benefit from a new design, more data, more photos, and a new, thoughtful arrangement that makes the content more accessible and easy-to-use. There are more helpful features, like thumb tabs to help keep you oriented in each chapter—now 11—and chapter leader pages that include a specific Introduction, Table of Contents and, in many cases, a unique User Guide, paving the way for the researcher to take full advantage of every last piece of data presented. *Profiles of Wisconsin* includes hundreds of statistical data points, tables and charts that provide solid, fact-based research, and dozens of maps and photos.

Here is an overview of the new chapter arrangement:

About Wisconsin: Facts & Photos

This 4-color chapter provides a real sense of the state from a variety of historical and physical vantage points. It includes Wisconsin history and geography, plus a photo gallery that includes not only sights unique to the state, but also its state flag, seal, motto, bird, flower, and more. This chapter also includes a timeline of political and newsworthy events from Wisconsin's founding to the present day.

Government: A State Guide

This is an important and detailed look at the history and structure of Wisconsin's government, including discussion of the state's legislative, judicial and executive branches and various types of local government. The chapter ends with a map of Wisconsin's eight US Congressional Districts.

Demographic Maps

These 11 colorful, full-page maps help to anchor the researcher to the state's diverse population, illustrating population, race and ethnic makeup (white, black, Asian, Hispanic), age, home values, household income, high school graduates, college graduates, and presidential election results.

Geography

This chapter explores Wisconsin's physical features, natural resources, federal land, and Indian reservations, including a satellite view of the state. In addition to providing a visual sense of the state, this data contributes to a better understanding of settlement patterns, economic development, and state resources that are vital for the state's continued growth.

Energy

This is a detailed look at Wisconsin's energy needs, uses and available resources—including petroleum, natural gas, coal, electricity and renewable energy. The energy sector is a signif-

icant economic driver for the state, and plays a big part in the overall lifestyle of its residents.

Climate

This chapter starts with a summary of Wisconsin's climate, which is followed by three colorful climate maps and profiles of both National and Cooperative Weather Stations. In addition, there are Weather Station Rankings with hundreds of interesting details, such as the highest annual snowfall—reported at 101.2 inches at Bayfield 6 N.

Comparative Statistics for Wisconsin's 100 Largest Communities

This chapter makes it easy to compare statistics for Wisconsin's 100 largest communities by dozens of data points, including density of people per square mile, land area, population size, ethnic percentages, household size, education level and much more. This is a treasure trove of data for grant writers, government researchers and demographers.

Top and Bottom Rankings of Wisconsin Places over 2,500

This chapter includes rankings for dozens of categories, for both the top 150 and bottom 150 communities with population over 2,500. Explore everything from places at highest elevation (Arbor Vitae at 1,627 feet above sea level) to lowest elevation (Algoma and Oconto at 584 feet above sea level). Other topics ranked include employment, household income, population size and many more.

Education

This chapter begins with an Educational State Profile that summarizes number of schools, students, diplomas granted and educational dollars spent. Also included are School District Rankings for 16 topics from Teacher/Student Ratios to High School Drop-Out Rates. Following these rankings are statewide assessment results from the *Wisconsin Student Assessment System (WSAS)*.

Facts & Photos

This four-color chapter includes a little bit of everything “Wisconsin”—state emblems, general map, photos, state history and a timeline. It provides an excellent grounding before digging into the statistics, charts, and rankings that follow.

A Guide to Wisconsin Government

Government at a Glance

Wisconsin state government is divided into three branches: legislative, executive, and judicial. The legislative branch includes the Wisconsin Legislature, which is composed of the senate and the assembly, and the service agencies and staff that assist the legislators. The executive branch, headed by the governor, includes five other elected constitutional officers, as well as 17 departments and 11 independent agencies created by statute. The judicial branch consists of the Wisconsin Supreme Court, the Court of Appeals, circuit courts, and municipal courts, as well as the staff and advisory groups that assist the courts.

Local units of government in Wisconsin include 72 counties, 190 cities, 404 villages, 1,257 towns, and several hundred special districts.

Origins of the 30th State

Wisconsin's original residents were Native American hunters who arrived here about 14,000 years ago. The area's first farmers appear to have been the Hopewell people who raised corn, squash, and pumpkins about 2,000 years ago. They also were hunters and fishers, and their trade routes stretched to the Atlantic Coast and the Gulf of Mexico. Later arrivals included the Chippewa, Ho-Chunk (Winnebago), Mahican/Munsee, Menominee, Oneida, Potawatomi, and Sioux.

From Wilderness to Statehood. The first Europeans to reach Wisconsin were French explorers, fur trappers, and missionaries. Wisconsin was included in the French sphere of influence from the 1630s until the signing of the 1763 Treaty of Paris, which concluded the French and Indian War and ceded the land encompassing Wisconsin to Great Britain. At the end of the Revolutionary War, 20 years later, the British ceded the vast, unsettled territory west of the Appalachian Mountains to the new United States of America. (Actual British control of the area did not end, however, until 1814 at the conclusion of the War of 1812.)

As a U.S. territory, Wisconsin was initially governed by the Northwest Ordinance of 1787, and then sequentially by the laws of the Indiana Territory, the Illinois Territory, the Michigan Territory and, finally in 1836, the Wisconsin Territory.

On August 6, 1846, the Congress of the United States authorized the people living in what was then called the Territory of Wisconsin "to form a constitution and State

government, for the purpose of being admitted into the Union". Based on this enabling act, the people of the territory called a constitutional convention in Madison to draft a fundamental law for governing the new state. The first proposal for a constitution was drafted in 1846 and submitted to the people on April 6, 1847, but the voters rejected it on a 20,231-to-14,119 vote because of several controversial provisions involving banking, voting rights, property rights of married women, and homesteading.

On March 13, 1848, a second convention submitted its draft, which was ratified by a vote of 16,799 to 6,384. The constitution then adopted remains in force to this day, although it has been amended on numerous occasions.

On May 29, 1848, Wisconsin became the 30th state admitted to the Union.

State Powers and Prohibitions. The enabling act passed by the U.S. Congress in 1846 declared that the Territory of Wisconsin was authorized to form a constitution and state government "on an equal footing with the original States in all respects whatsoever." From the moment of its birth, like the original states, the State of Wisconsin, its people, its lawmaking bodies, its administrative machinery, and its courts were subject to the U.S. Constitution.

In ratifying the U.S. Constitution, the 13 original states specifically delegated a number of powers to the U.S. Congress. Wisconsin agreed to this delegation when joining the Union. Congress is given the authority to regulate interstate and foreign commerce, maintain armed forces, declare war, coin money, establish a postal system, and grant patents and copyrights. Congress also has power to "make all laws which shall be necessary and proper" for carrying out its responsibilities.

The Tenth Amendment to the U.S. Constitution specifies: "The powers not delegated to the United States by the constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people." Although the powers delegated to the federal government and the powers reserved to the states might appear to be neatly delineated, government responsibilities and activities have not been that clear-cut. In fact, many powers are exercised concurrently by the federal government and the states. Through judicial interpretation and laws enacted in response to changing societal needs, the powers exercised by Congress have been greatly expanded to include many activities once considered reserved to the states, as well as new authority not even imagined by the drafters, such as regulation of television and radio or development of a

Demographic Maps

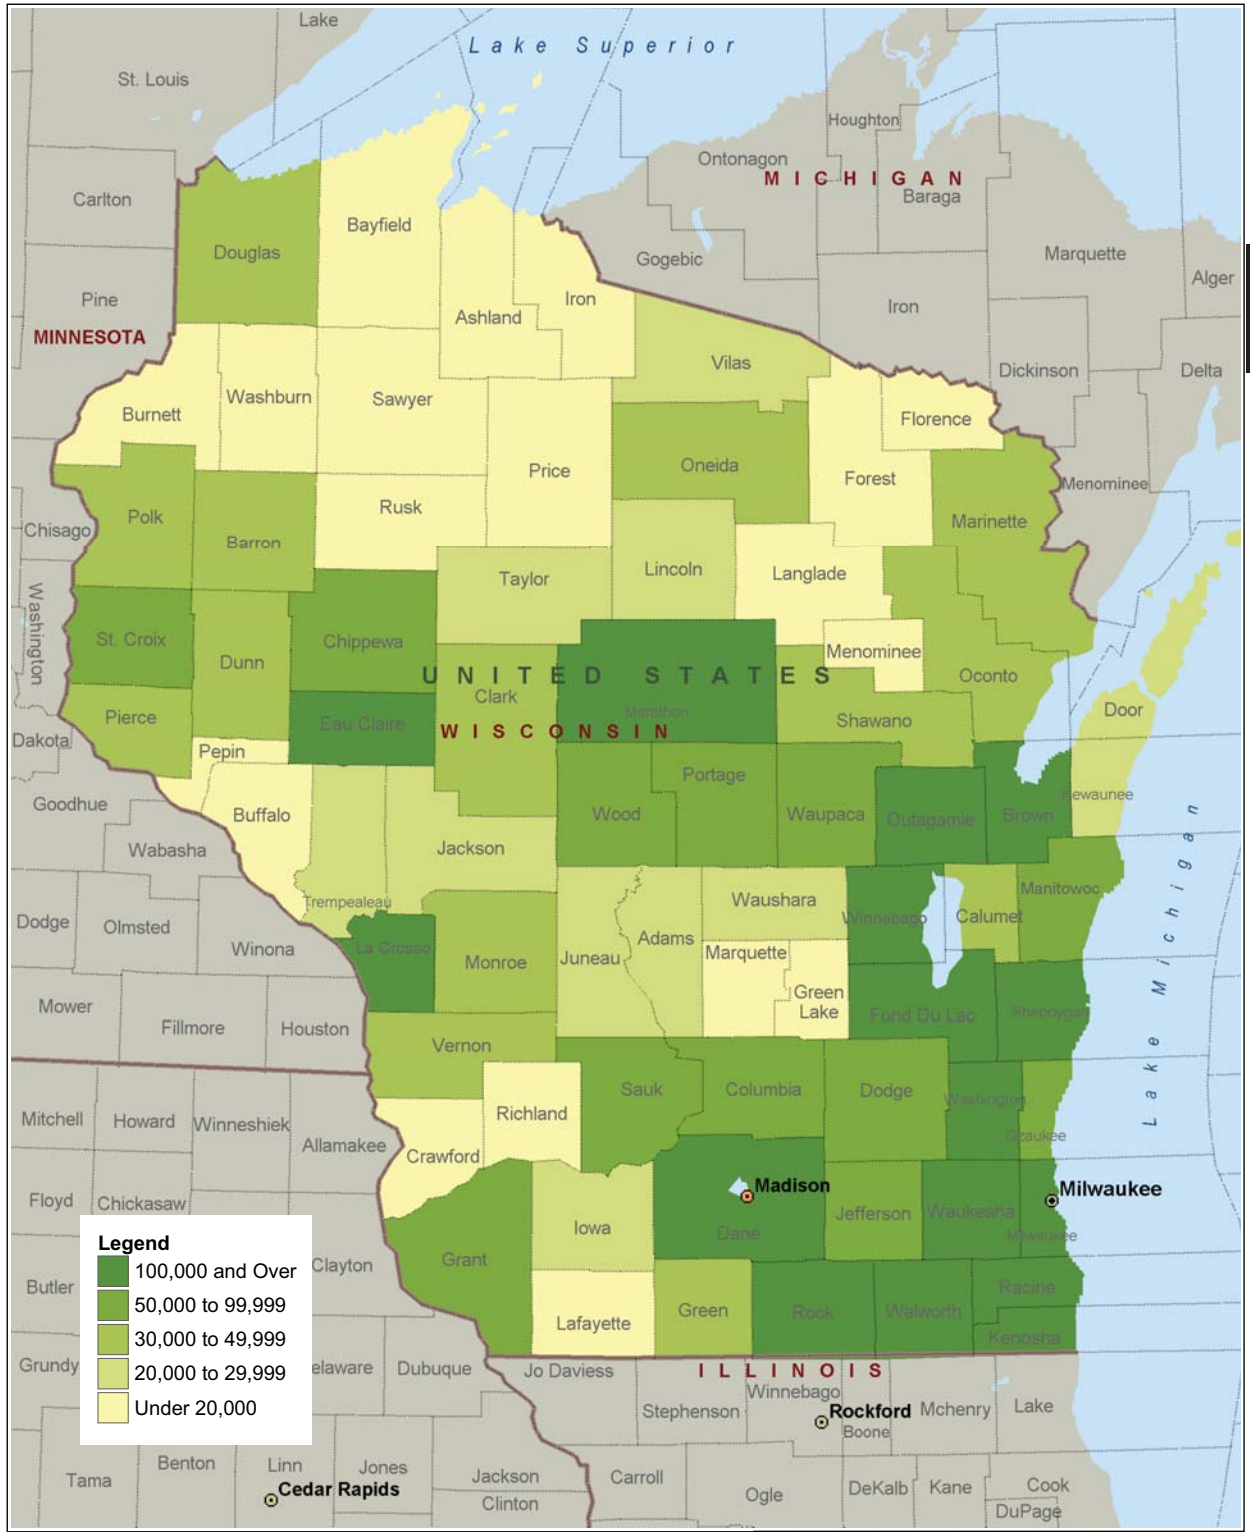

These 11 demographic maps, in colors that provide clear visual representations, illustrate the diversity of Wisconsin—from concentration of general population, racial centers, and age groups, to regions of the state’s wealthiest and most educated citizens.

Wisconsin Energy Profile

Quick Facts

- Wisconsin's industrial sector, including agriculture and the energy-intensive manufacture of food and beverage products, is the state's largest energy-consuming sector. In 2016, industry accounted for 33% of the state's end-use energy consumption.
- Coal is the leading fuel used for electricity generation in Wisconsin. In 2018, coal-fired power plants provided 49% of the state's net generation.
- Natural gas-fired power plants fueled 26% of Wisconsin's electricity generation in 2018, second only to coal, and almost three times more than its share a decade earlier.
- In 2018, 9% of Wisconsin's utility-scale net electricity generation came from renewable energy resources, including hydroelectric power, wind, biomass, and solar.
- In 2018, Wisconsin ranked seventh in the nation in ethanol production capacity, with facilities able to produce more than a half billion gallons annually.

Overview

Bordered on three sides by navigable waterways, Wisconsin lies between Lake Superior and Lake Michigan to the north and east and the Mississippi River and the Saint Croix River to the west.¹ The state lacks fossil fuel resources of its own^{2,3,4} but ships coal and petroleum products from its many ports.⁵ Coal from Wyoming and Montana is transferred from railcars to ships at the Lake Superior port at Superior, Wisconsin, for shipment east through the Great Lakes-Saint Lawrence Seaway.⁶ Coal and petroleum products are also shipped from other Wisconsin ports along Lake Michigan and the Upper Mississippi River System. Pipelines carry crude oil, petroleum products, and natural gas across the state.^{7,8}

Wisconsin has several renewable energy resources. The state's fertile soil and strong agricultural economy make it a leader in the market value of agricultural products.^{9,10} Wisconsin's corn crop feeds the state's ethanol production facilities.¹¹ Methane, created as anaerobic digesters process industrial and municipal wastewater and the manure from some of the state's more than one million cows, is used for heat and electricity generation, and methane gas is captured from the state's landfills as well.^{12,13} Wisconsin has ample biomass resources in its more than 16 million acres of forestland and from the agricultural residue from the state's many farms.^{14,15} Dozens of dams throughout the state supply hydroelectric power,¹⁶ and wind re-

sources have been developed on the ridges in eastern Wisconsin near Lake Michigan and in the southwestern part of the state.¹⁷ Although Wisconsin has limited solar potential, solar power contributes a small but increasing amount of the state's electricity generation.^{18,19}

Despite winters that are cold and snowy, with temperatures frequently falling to minus 30°F in the northern part of the state, Wisconsin's energy consumption per capita is less than that of almost half the states and only slightly above the national average.^{20,21} Industry is the leading end-use energy consumer in the state.²² In addition to agriculture, the energy-intensive food and beverage manufacturing industry is a major contributor to the state's gross domestic product (GDP).^{23,24} An important dairy state, Wisconsin produces about one-third of the cheese made in the nation, and beer is the state's most valuable processed beverage product.²⁵ Overall, the industrial sector accounts for one-third of the energy consumed in the state, the transportation sector uses nearly one-fourth, and the residential and the commercial sectors roughly split the rest.²⁶

Renewable Energy

Wisconsin's primary renewable resource is biofuels. The state is among the top 10 ethanol-producing states in the nation, and ethanol is one of the few energy resources that Wisconsin produces and sends to other states.^{27,28,29} Wisconsin's nine ethanol plants can produce more than 500 million gallons of ethanol per year from facilities that use corn as a feedstock.^{30,31} The state is one of the nation's leading corn-producing states, and most of the ethanol plants are located in agriculturally rich southern and central Wisconsin.^{32,33} The state also has two facilities that can produce 27 million gallons of biodiesel each year from distillers corn oil and used cooking oils.^{34,35}

Renewable resources power nearly one-tenth of Wisconsin's net electricity generation. The state's renewable electricity generation comes from hydroelectric, wind, biomass, and solar power plants. Hydroelectric power contributes almost half of the state's renewable electricity generation.³⁶ Of the approximately 3,900 dams in Wisconsin about 150 are used to generate hydroelectric power. Large hydroelectric dams were constructed in the 1950s and earlier, but a few small hydroelectric facilities were recently created by adding generators at existing dams.^{37,38}

Climate

Starting with a user guide to interpret the climate data, this chapter discusses Wisconsin’s physical features, including relief and weather station maps, and goes on to include all the state’s weather stations, listed in a number of ways, plus rankings.

The Badger State

Forward

Green Bay Int'l Airport

The Green Bay climate is modified by surrounding topography. The modification is caused by the Bay of Green Bay, Lakes Michigan, and Superior, and to a lesser extent, the slightly higher surrounding terrain terminating in the Fox River Valley. The city of Green Bay is located at the mouth of the Fox River, one of the largest rivers flowing northward in the United States. It empties into the south end of the Bay.

The modified continental climate of Green Bay is shown by the few occurrences of 90 degree temperatures in the summer season and the few occurrences of sub-zero temperatures in the winter season. The narrow temperature range stems from the lake effects and the limited hours of sunshine caused by cloudiness.

Precipitation normally falls in the five-month period May through September. Three-fifths of the annual total is in the growing season, most often falling during thunderstorms. During the winter months, snowfall is less than in nearby communities where the ground is slightly higher.

The comparatively low range in temperature along with the greater portion of the precipitation falling during the growing season is conducive to the development of the dairy industry. Cherry and apple orchards are important crops in nearby lake communities. The growing of potatoes and canning vegetables are predominant in-land. Paper products are the major manufacturing industry.

High winds, excessive precipitation, and electrical storms cause occasional damage. Snowstorms are the principal winter hazard. While the winters are long in Green Bay, the extremes are never as severe as the northern latitude location would indicate.

Based on the 1951-1980 period, the average first occurrence of 32 degrees Fahrenheit in the fall is October 2 and the average last occurrence in the spring is May 12.

Community Rankings

This chapter ranks incorporated places and CDPs (Census Designated Places) with populations of 2,500 or more. Most topics have two tables, one in descending order, and one in ascending order. Ten topics only include tables in descending order—Water Area, Ancestry (five tables), Black/African American Population, Asian Population, American Indian/Alaska Native Population, Native Hawaiian/Other Pacific Islander, Homeowner Vacancy Rate, Rental Vacancy Rate, Population Under 18 Years Old with No Health Insurance, and Commute to Work: Public Transportation. This is because there are more than 150 communities that place at the bottom of these topics with zero numbers.

Land Area	141
Water Area	143

Notes: † The Census 2010 population figure is used to calculate the percentages in the Hispanic Origin and Race categories. Ancestry percentages are based on the 2006-2010 American Community Survey population (not shown); ‡ Numbers in parentheses indicate the number of people reporting a single ancestry; * Numbers in parentheses indicate the number of persons reporting this race alone, not in combination with any other race; Please refer to the Explanation of Data for more information.

Ancestry

Profiles

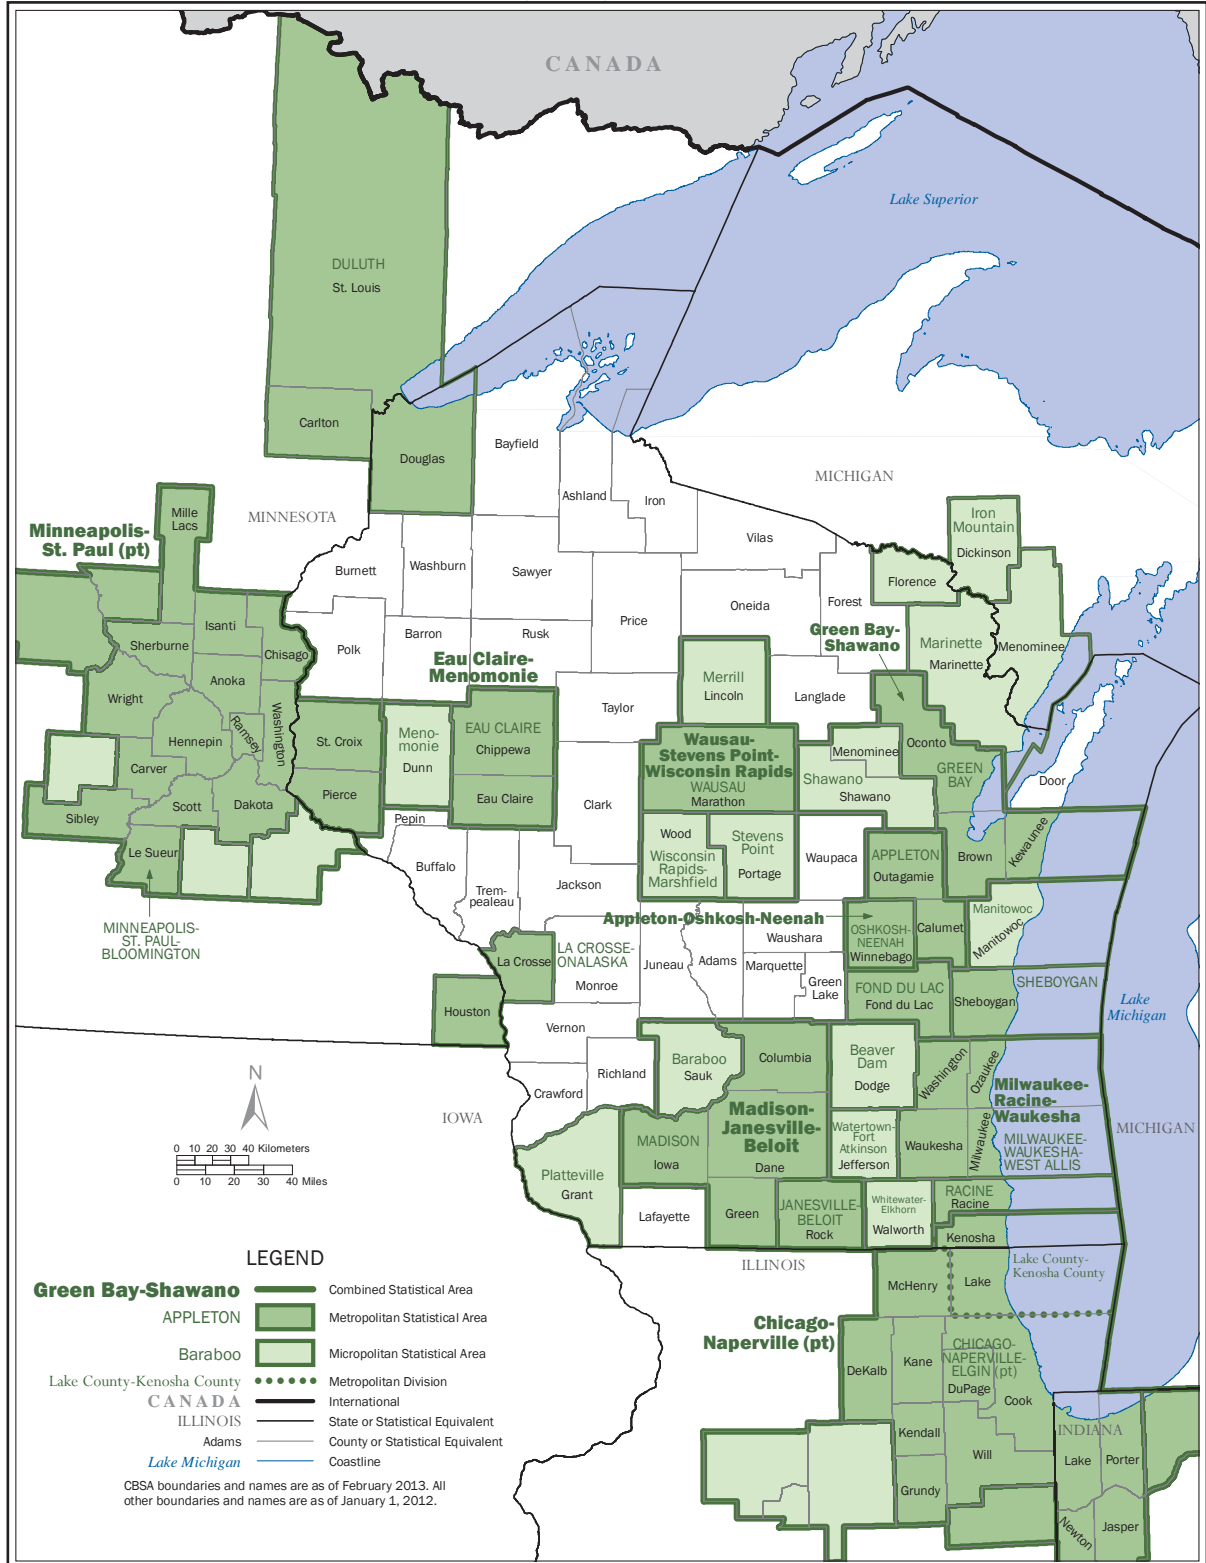

This chapter begins with a detailed user guide to help with interpreting the individual county and place profiles that follow. Each profile—all 2,139 of them—is a concise snapshot of the data culled from census data and the previous subject-driven chapters. They are arranged alphabetically by county, then by place.
